PROFESSIONAL SUMMARY

Software Engineer with **1+ year** of professional software development experience at WNS-Vuram, specializing in **Appian enterprise application development, workflow automation, integrations, and relational data**. Hands-on experience with Appian SAIL, Process Models, Records, CDTs, SQL, and AI integrations. Currently developing backend applications using **Java, Spring Boot, Spring Data JPA, Spring Security, REST APIs, and MySQL**, with additional hands-on experience in **React and JavaScript**. Strong foundation in **OOP, Data Structures & Algorithms, Git, API development, debugging, testing, and software development practices**. Solved **100+ programming problems on LeetCode** and actively building production-oriented Java backend applications.

TECHNICAL SKILLS

Languages: Java, JavaScript, SQL, C

Java: Core Java, OOP, Collections, Exception Handling, DSA

Backend: Spring Boot, Spring Data JPA, Hibernate/JPA, REST APIs, Spring Security, JWT, Authentication & Authorization

Testing: JUnit, Mockito, Unit Testing, API Testing, Functional Testing, Debugging

Database: MySQL, SQL, Relational Database Design, Schema Design

Frontend: React.js, JavaScript, HTML, CSS

Appian: SAIL, Process Models, Expression Rules, Custom Data Types (CDTs), Records, Sites, Data Fabric, Object Security, Record-Level Security, Connected Systems, Web APIs, Document Generation, AI Gateway, AI Skill Designer, AI Copilot

AI & Integrations: REST API Integration, AI Model Integration, Document/PDF Data Extraction, AI Gateway

Tools & Practices: Git, GitHub, Postman, VS Code, Agile/Scrum

WORK EXPERIENCE

Associate Technical Consultant | WNS-Vuram

June 2025 – August 2026

- Contributed to **5+ enterprise applications**, including Travel Booking, Talent Management, Refund Management, Case Management, and Patient Management Systems, covering workflow automation, UI development, data modeling, integrations, and business logic.
- Designed and developed Appian Process Models and dynamic SAIL interfaces with conditional logic, validations, approval workflows, and reusable components for enterprise business processes.
- Developed Custom Data Types (CDTs), Appian Records, relational data models, MySQL schemas, and SQL queries to support application workflows and data-driven interfaces.
- Implemented REST/Web API integrations, Connected Systems, AI Gateway integrations, and Dynamic Document Generation for enterprise workflows.

- Developed AI-integrated UI components to display PDF-extracted key-value and tabular data, mapping API outputs to Appian data structures.
 - Developed and maintained UiPath automation workflows for email-based IROPS rescheduling, data processing, validation, exception handling, and business process automation.
 - Executed unit testing and functional validation across interfaces, Process Models, expression rules, integrations, and data workflows; investigated and resolved defects.
 - Collaborated with team members on requirements analysis, development, testing, debugging, documentation, and Agile delivery.
-

PROJECTS

Student Management System | <https://github.com/ABSruthika/student-management>

Java | Spring Boot | Spring Data JPA | Spring Security | JWT | MySQL | React.js | REST APIs | Maven | Git

- Developed a full-stack Student Management System with a React.js frontend and Spring Boot REST APIs, enabling student data management through a responsive web interface.
- Implemented Controller-Service-Repository layered architecture, CRUD operations, JPA entity relationships, request validation, and centralized exception handling.
- Built React.js UI components and forms and integrated them with backend REST APIs to perform student CRUD operations and display data dynamically.
- Implemented Spring Security with JWT-based authentication and role-based authorization to secure REST endpoints and manage authenticated user access.
- Designed relational database entities and integrated them with Spring Data JPA and MySQL for persistent student and academic data management.
- Tested REST APIs using Postman and managed source code using Git/GitHub.

Academic Lab Slot Booking System | <https://github.com/ABSruthika/academic-lab-booking-system>

Java | Spring Boot | Spring Data JPA | Spring Security | JWT | MySQL | React.js | REST APIs

- Developed a full-stack lab slot booking system using Spring Boot REST APIs and React.js to manage lab resources, availability, and bookings.
 - Developed React.js components, booking forms, and data views and integrated them with backend REST APIs for real-time slot availability and booking operations.
 - Implemented REST APIs using Spring Boot, Spring Data JPA, and layered architecture for lab slot and resource management.
 - Implemented booking availability and conflict-detection logic with relational entity mappings to prevent overlapping slot reservations.
 - Integrated Spring Security and JWT-based authentication with role-based authorization for secure access to booking and resource management feature.
-

EDUCATION

B.E. (Honours) — Computer Science and Engineering

Bannari Amman Institute of Technology | CGPA: 8.61 | 2021–2025

CERTIFICATIONS

- Java Full Stack — Wipro TalentNext
- Data Structures in Java — Coding Ninjas
- SQL and Relational Databases — IBM Cognitive Class
- Appian Essentials – Appian Academy
